

## Science Policy

January 2019

To be reviewed January 2021

### Introduction

This policy outlines the teaching, management and organisation of science at Worth Primary School. The new National Curriculum 2014 states why we teach science in schools:

*‘A high-quality science education provides the foundations for understanding the world through the specific disciplines of biology, chemistry and physics. Science has changed our lives and is vital to the world’s future prosperity, and all pupils should be taught essential aspects of the knowledge, methods, processes and uses of science. Through building up a body of key foundational knowledge and concepts, pupils should be encouraged to recognise the power of rational explanation and develop a sense of excitement and curiosity about natural phenomena. They should be encouraged to understand how science can be used to explain what is occurring, predict how things will behave, and analyse causes.’*

### Mission Statement

At Worth Primary School we believe that all pupils deserve and need a fully rounded curriculum to become confident, independent lifelong learners. Science has a crucial role in this and is considered a vital part of our pupils’ experiences whilst at school. As such, all pupils are given opportunities to participate in activities across the disciplines of biology, chemistry and physics during their time in school in line with the National Curriculum 2014.

### Key Aims and Objectives

Aims	Objectives
<b>1. To use a variety of teaching strategies to give pupils an increasingly secure understanding of the concepts and knowledge of science.</b>	<ul style="list-style-type: none"><li>❖ To plan for whole class/small group and individual learning activities during science lessons</li><li>❖ To use research, practical activities and demonstration to develop scientific knowledge.</li></ul>
<b>2. To ensure all pupils develop and use the skills of scientific investigation</b>	<ul style="list-style-type: none"><li>❖ Activities will be planned for pupils to ensure they learn and use the skills of observing, identifying, classifying, comparing, predicting, estimating, measuring, testing, experimenting, fair testing, communicating and drawing conclusions.</li></ul>

<p><b>3. To stimulate pupils' interest and curiosity in the world around them by creating awe and wonder.</b></p>	<ul style="list-style-type: none"> <li>❖ Plan for practical, hands-on science activities where possible.</li> <li>❖ Deliver high-quality, interesting and engaging science lessons.</li> <li>❖ Provide opportunities for pupils to use their scientific knowledge to support them in asking questions, discussing ideas and theories.</li> <li>❖ Provide children with opportunities to experience the work of professional scientists through visits to organisations/museums, workshops</li> </ul>
<p><b>4. To help pupils understand the language and specialist vocabulary of science and to use technical terminology accurately and precisely.</b></p>	<ul style="list-style-type: none"> <li>❖ Ensure that pupils are taught specific science vocabulary associated with each topic.</li> <li>❖ Expect pupils to use taught vocabulary in their recording of their scientific learning.</li> </ul>
<p><b>6. To track pupil progress in science to inform future learning opportunities.</b></p>	<ul style="list-style-type: none"> <li>❖ Use teacher assessment to track pupil progress.</li> <li>❖ Use informative feedback following assessment and allow pupils time to respond to this feedback to ensure progress.</li> </ul>
<p><b>7. To develop the use of information and communication technology in science studies</b></p>	<ul style="list-style-type: none"> <li>❖ To plan opportunities to use the data – logger and other technological aids.</li> </ul>

### **Curriculum**

The school has adopted the Kent Scheme of Work written by Andrew Berry as the basis of our science curriculum in school. Skills, concepts and knowledge will always relate to the scheme of work but teachers may alter the context in which these are taught to enable cross curricular links to be made. A cross-curricular approach is encouraged where possible so pupils will experience science through literacy (reporting and recording), history (the work of influential scientists over time), geography (science of geology, habitats and other earth sciences), mathematics (accurate measuring, and data recording) and Computing.

To ensure balanced coverage within the mixed-age classes at Worth School, a two-year rolling cycle is followed within the Kent scheme of work. The topics are planned so that they build upon prior learning. There are opportunities for children of all abilities to develop their skills and understanding in each topic and progression is built into the scheme so that children are continually challenged as they move up through the school.

### **Assessment**

**Formative:** Teachers will continually assess a pupil's progress and understanding during and after lessons, this will be through observation, discussion with pupils and marking of work. Pupils will have opportunities to respond to marking in their books. Over the course of a unit, the teacher will highlight the 'Content Assessment Statements' in the appropriate colour for the term.

**Summative:** Teachers may devise an end of unit quiz or test to ascertain a pupil's understanding against the standards outlined for that particular unit and then date the 'Content Assessment Statements' Additional notes may be made by the teacher on this sheet.

In addition, teachers will need to consider each pupil's attainment in specific investigative skills and highlight/date when each statement has been met on the investigative skills year group sheet.

### **Resources**

All the main practical science resources are currently based in the mobile classroom. These resources should be kept neat and tidy. Any missing or damaged resources should be reported to the subject leader. The Kent Scheme provides resource lists for each unit of study.

### **Health and Safety**

Pupils will be taught to use scientific equipment safely when using it during practical activities. Class Teachers and/or Teaching Assistants should report any damages to the subject leader and defective equipment should be taken out of action. The school has adopted the ASE book 'Be Safe' as its model risk assessment and therefore this should be consulted when necessary. If an activity is not covered by 'Be Safe' then we will contact CLEAPSS (School Science Service Helpline 01895251496) for further advice.

### **Equal opportunities**

All pupils will have an equality of access to a broad and balanced science curriculum irrespective of gender, ethnicity or special educational needs.

### **Inclusion**

All pupils will have access to the full National Curriculum for science. At Worth Primary School teachers adopt an inclusive approach to their science planning and teaching; ensuring all pupils of all abilities and backgrounds have an equal opportunity to make good progress and enjoy science. Pupils with specific learning difficulties and pupils with disabilities will be provided with modified learning programmes, resources and equipment appropriate to their needs. For most pupils curriculum access will be enabled through the use of modified teaching methods and the deployment of Teaching Assistants.
